WHAT IS FENTANYL?

Fentanyl is a powerful synthetic opioid that is often 50 to 100 times stronger than morphine.

WHAT ARE OPIOIDS?

Opioids include prescription medications used to treat pain such as fentanyl, and also includes illegal drugs such as heroin and additional synthetic opioid analogs.

1 PILL CAN KILL

- Because of its potency and low cost, drug dealers have been mixing fentanyl with other drugs, including methamphetamine, cocaine, and even marijuana.
- Taking pills from an unknown source is like playing Russian roulette. The pill you take may not kill you this time, but it's when, not if.
- Thousands of people have struggled with opioid addiction, and there are treatment options.
- If you want help, there are people who have dedicated their lives to help you. Reach out to your teacher, school counselor, or principal and they can help you.
